## INSTALLATION NOTES

---

### Fullnose Edger™

When a hard edge or corner is not appropriate in your landscape plan, this paving stone is the perfect solution. With its smooth, rounded exposed edge, it's ideal for pool edges, the front of steps and as edging around areas like driveways and walkways.

Applications – Coping for steps, pool edges, planters and walls. Units are designed for straight applications but radius applications can be achieved by cutting tapered units.

Connection – non-mechanical connection. Use appropriate concrete adhesive for connection between units. Install with tight joints or 3/16" gap between units and amend with an exterior latex caulking. Cutting may be required; a diamond blade saw is required to cut coping properly. Glue all coping using a specially formulated concrete adhesive that is strong and will not break down over time. Always read adhesive manufacturers' directions prior to gluing.

Handling – Handle un-tumbled versions of this coping gently to avoid chipping edges.
