INSTALLATION NOTES

Ledgestone is a universal coping system that is turning heads with its remarkably natural appearance. Featuring pitched edges to work interchangeably with any wall, the design selections are optimized.

Applications – Coping for steps, pool edges, planters and walls. Units are designed for straight applications but radius applications can be achieved by cutting tapered units.

Connection – non-mechanical connection. Use appropriate concrete adhesive for connection between units. Install with tight joints or 3/16" gap between units and amend with an exterior latex caulking. Cutting may be required; a diamond blade saw is required to cut coping properly. Glue all coping using a specially formulated concrete adhesive that is strong and will not break down over time. Always read adhesive manufacturers' directions prior to gluing. NOTE: always scarify (rough-up) the back surface of the coping units with a grinder prior to gluing so that you will have a strong secure connection.

Note: always slope Ledgestone units slightly (from front to back or back to front) to prevent pooling of water on the surface.

Handling - Handle gently to avoid chipping edges.
